Protect your home or business from flooding with FloodSafe USA’s patented automatic flood proofing system

- **We don’t change the look of your home!**
  Our system seals your walls, windows, and doors watertight without altering the look of your home.

- **Affordable Alternative to Elevating**
  Elevating your home costs hundreds of thousands of dollars. FloodSafe USA’s system is an affordable, proven alternative.

- **Automatic Protection**
  Shut the door and walk away. Our patented system is that simple. No sandbags or gates needed.
Never Flood Again!
FloodSafe USA has developed comprehensive, **built-in and fully automatic flood protection technology** for America’s homes and businesses. By flood proofing walls, windows, and doors you can protect your home or commercial building against flash-flooding or sustained flooding over a prolonged period of time. The founder, **Ron Helton**, has created an alternative to elevating structures at a fraction of the cost. You never have to fear the devastating effects of water intrusion caused from rising flood waters again! Our **tested and proven** flood protective measures restore quality and value to your property and peace of mind to the ones that occupy it.
SEAL ED WALLS

You can’t tell it’s sealed watertight! Our patented wall system includes a combination of coatings, sealant materials, and specialized application techniques applied to the existing exterior wall to seal it watertight.

FLOOD DOORS

Automatic protection. Shut the door and walk away. Our patented system is that simple. No sandbags or gates needed. Looks and operates like a normal door.

FLOOD WINDOWS

FloodSafe USA Flood Windows provide 24/7 automatic flood protection, and our flood window solutions provide the beauty and aesthetics typically built into a home or commercial building originally.
Design Considerations

Exterior Wall Substrate Finishes
• Masonry/Stucco/Manufactured Siding Materials

Exterior Door Alternatives
• Sliding Doors
• Double Doors
• Doors with Glass Inserts

Window Alternatives
• Operable/Fixed-glass/Storefront
• Retain Existing Glass Area or Modify Sill Heights
Relocate, Elevate, Protect All Surface Apparatus
Seal All Thru-wall Penetrations
Wall/Foundation Base Joint Protection
Exterior Wall Substrate Preparation & Sealants
Masonry Veneer: Wall cavity in-fill & weep hole elevation procedure
Masonry

- Apply substrate aesthetic finish per design specifications
- Transparent
- Paint
- Cosmetic Overlay

Stucco

- Apply base-joint sealant procedures and lower trim (optional)
- Apply coatings and sealants directly over existing stucco finish
- Apply paint to match existing stucco or add faux finish wainscot per design specifications
- Add trim cap with concealed continuous vent at top of wainscot
**Interior Demising Drywall Substrate & Sealants**

- Cut-out and remove sheetrock to required design height
- Install cement-board where sheetrock has been removed
- Saw-cut concrete foundation to form a 1/4” wide x 3/4” deep reglet
- Install Base Joint Flashing
- Apply protective coatings and apply finish
Flood Doors

- Remove existing door from rough opening
- Set and seal in-place new flood door unit
- Integrate wall substrate sealants with flood door frame
- Trim/paint & install door hardware
Residential Flood Doors
